

UTILITY UNITS

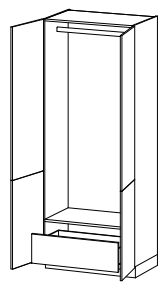

To tap further sales potential beyond the kitchen area, we now offer a coordinated series of tall units/tall shelving units designed for utility areas, particularly for organising laundry.

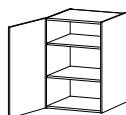

There are planning modules available for built-under washing machines, collecting laundry, drying laundry and ironing laundry, as well as coat units and shoe rack units for storing clothes. The units of this series are available in the carcass ranges 73 and 80.

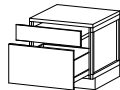

Sturdy, steel-reinforced washing machine support which also guarantees stability after a possible leak. Under the device there is a pull-out shelf for standing washing baskets on. The support carcass is assembled "with space" to the adjacent modules and thus does not transmit any natural vibrations.

Ironing unit

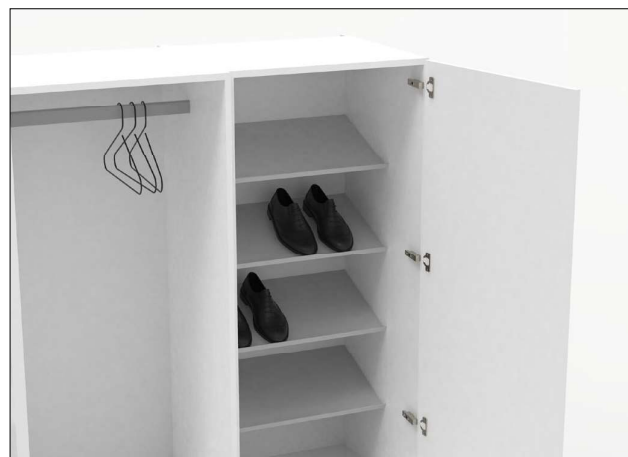

Laundry collecting unit with 3 inserts and washing baskets. Optional rear panel elements for identification on site: white, dark, colourful.

An electro shelf integrated in the ironing unit with power outlet, for storing an iron as well as supplying power to it. The vertical compartment provides plenty of storage space for ironing boards.

Grid frame pullout in linen shelf unit for easy care clothes which cannot be put in the tumble dryer.

Shoe rack made of powder-coated steel sheet. For a better overview and large shoe sizes, on a slight slant; can also be used in units 36 cm deep.
